

Upgrading to Sophos Endpoint Security 9.5

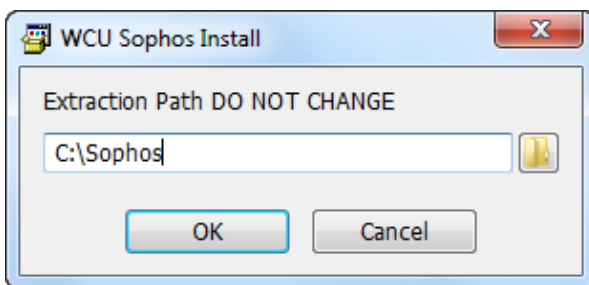

1. Go to the following site: <https://www.wcupa.edu/sophos/>
2. Click on the executable that correlates to your operating system
3. Type in your network user name and password
4. Click Run

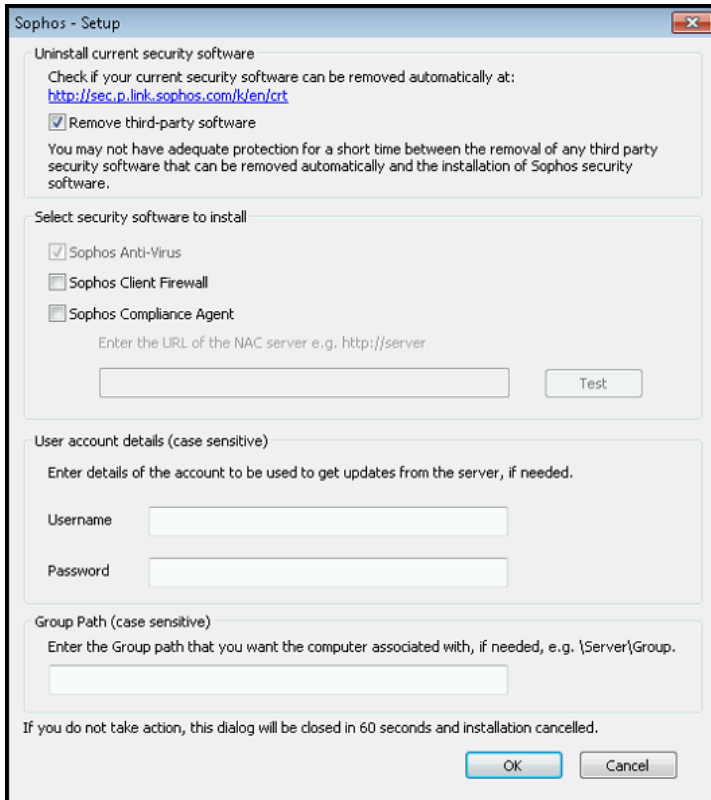

5. Click Run

6. Click OK, Sophos will begin its installation process.

7. Click OK on this window, **do not** fill in username and password

Sophos - Setup

Uninstall current security software

Check if your current security software can be removed automatically at:
<http://sec.p.link.sophos.com/k/en/crt>

Remove third-party software

You may not have adequate protection for a short time between the removal of any third party security software that can be removed automatically and the installation of Sophos security software.

Select security software to install

Sophos Anti-Virus

Sophos Client Firewall

Sophos Compliance Agent

Enter the URL of the NAC server e.g. http://server

User account details (case sensitive)

Enter details of the account to be used to get updates from the server, if needed.

Username

Password

Group Path (case sensitive)

Enter the Group path that you want the computer associated with, if needed, e.g. {Server}Group.

If you do not take action, this dialog will be closed in 60 seconds and installation cancelled.

8. As soon as the install box disappears, right-click on the Sophos  icon located in the lower right-corner of your screen and click “View updating status”.

9. Once the update window disappears, close any open windows and reboot your computer.
