

The Effect of Immigration Public Policy and Sentiment on Latina Maternal and Child Health in Chester County: A Longitudinal Study

Miguel Ceballos, WCU Sociology

MCHC 2018 Annual Report

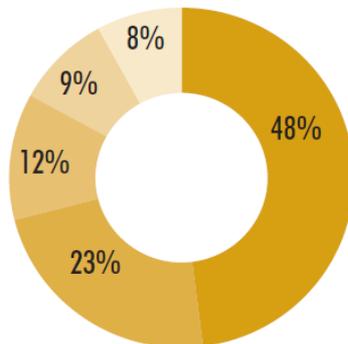

“Chester County is one of the wealthiest counties in the state, yet...

...1 in 4 pregnant women in the county have not received prenatal care visits in the first trimester.”

...over 33,000 (6.5%) residents are uninsured.”

...Latinos are 3 times more likely to lack access to healthcare coverage”

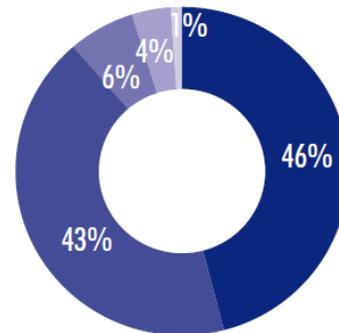

Most Frequently Served Communities

■ Kennett Sq./Oxford
 ■ Coatesville
 ■ Other
■ West Chester
 ■ Phoenixville/Pottstown

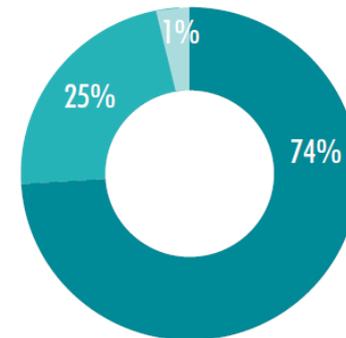

*“Other” includes MCH Health Insurance Initiative Agency Partners

Population Served

■ Latino
 ■ White
 ■ Black/African American
■ Other/Unknown
 ■ Asian

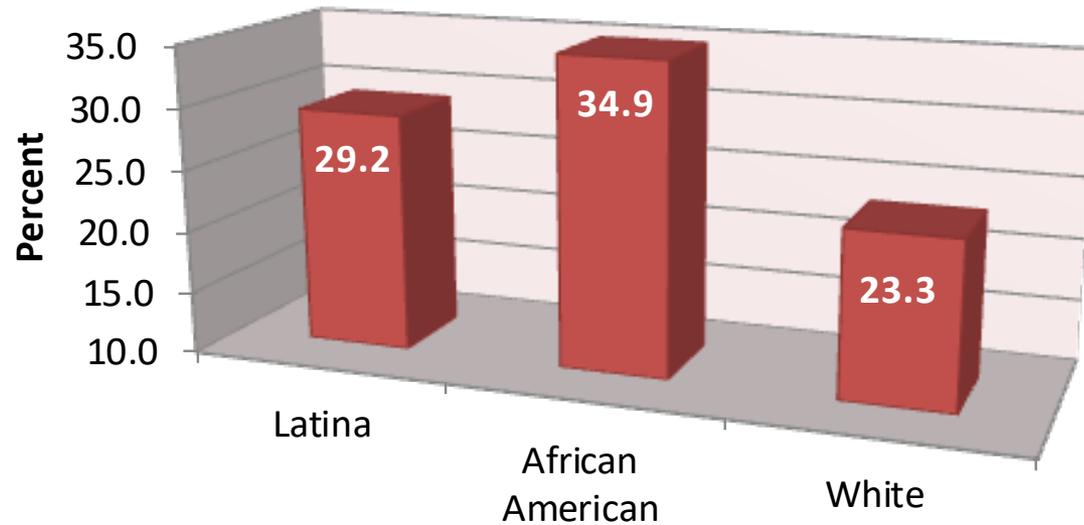

Household Income

■ 100% Federal Poverty Level (FPL)
■ 200% FPL
 ■ 300% FPL

Chester County Postpartum Study, 2003–2013

Healthy Start Participants at Risk of Postpartum Depression by Race and Ethnicity, (EPDS level ≥ 9)

Chester County Postpartum Depression Study Results

Results from a multivariate analysis statistically controlling for postpartum depression risk factors:

- ▶ Latinas living in communities with majority Latino and African American populations are at higher risk of postpartum depression as compared to those living in communities with a majority white population.
- ▶ Latinas with undocumented immigration status living in communities with majority Latino populations have a higher risk of postpartum depression as compared to those with documented status.

Risk factor covariates: history of mental illness, prenatal and postnatal risks, number of children, stress during pregnancy, social support, socioeconomic status, and maternal age.

Research Question

Do current U.S. immigration policies, and anti-immigrant and anti-Latino sentiments affect Latina maternal and child health, and healthcare access and utilization in Chester County?

The proposed project

- ▶ Survey of Healthy Start participants
 - immigration history, socioeconomic background, health behaviors, child health, mental health, health care access and utilization
 - ▶ Secondary data analysis
 - MCHC health and social data of participants, 2003–2019
 - ▶ Comparison data from surrounding counties
-
